DETAILED ACTION

Response to Arguments

- 1. Applicant's arguments with respect to claims 1-3, 5-8, and 16 have been considered but are moot in view of the new ground(s) of rejection.
- 2. The examiner notes newly amended claims 16 and 17 and thus hereby withdraws the objection made to these claims in the previous Office action.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1, 2, 5, 6, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida (JP 4-364063 A) in view of Natsume et al. (USPN 5,477,062) and further in view of Dasse et al. (USPN 5,399,505).
- 5. In reference to claims 1 and 16, Yoshida (JP 4-364063 A) discloses a structure which meets the claim. Figures 1 and 2 of Yoshida disclose an SiP (system in package) device comprising a chip on chip (COC) device having a logic chip (105) having a logic circuit and a memory chip (101) mounted on the logic chip (105). The memory chip (101) comprises basic chips (104) functioning as a chip independently from each other. A dicing line is interposed between the basic chips (104), connects the basic chips

Application/Control Number: 10/787,413 Page 3

Art Unit: 2826

(104), and configures a part of the memory chip (101). A bump (106) connects the logic chip (105) and the memory chip (101). Although not shown, it is understood that a package covers the COC device. Yoshida does not disclose the use of a test element group in the dicing or scribing line. However the use of a test element group in the dicing or scribing line is well known in the art. Natsume et al. (USPN 5,477,062, hereinafter referred to as the "Natsume" reference) discloses that test element groups in the dicing or scribing line allow for performance testing of basic elements (column 1, lines 13-19). Dasse et al. (USPN 5,399,505, hereinafter referred to as the "Dasse" reference) discloses that testing is needed in order to determine whether or not a die is functional and that a known goal in the art is to detect and screen out defective circuitry as early as possible during the manufacturing process (column 1, lines 12-59). In view of Natsume and Dasse, it would therefore be obvious to provide a test element group the dicing or scribing line.

- 6. With regard to claim 2, it is understood that the basic chips (104) have the same layout.
- 7. With regard to claim 5, Yoshida teaches all of the claimed invention except for the square shape and exact length of the basic chip. Although Yoshida does not teach the exact square shape and length as that claimed by Applicant:

Note that the specification contains no disclosure of either the critical nature of the claimed dimensions or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. <u>In re Woodruff</u>, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

Application/Control Number: 10/787,413

Art Unit: 2826

The shape, size, dimension differences are considered obvious design choices and are not patentable unless unobvious or unexpected results are obtained from these changes. It appears that these changes produce no functional differences and therefore would have been obvious. Note *In re* Leshin, 125 USPQ 416.

Therefore claim 5 is not patentably distinguishable over the Yoshida reference.

8. With regard to claim 6, Yoshida teaches all of the claimed invention except for the exact width of the basic chip. Although Yoshida does not teach the exact width as that claimed by Applicant:

Note that the specification contains no disclosure of either the critical nature of the claimed dimensions or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. <u>In re Woodruff</u>, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

The shape, size, dimension differences are considered obvious design choices and are not patentable unless unobvious or unexpected results are obtained from these changes. It appears that these changes produce no functional differences and therefore would have been obvious. Note *In re* Leshin, 125 USPQ 416.

Therefore claim 6 is not patentably distinguishable over the Yoshida reference.

- 9. Claims 1, 2, 5, 6, and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshida (JP 4-364063 A) in view of Tsuji et al. (USPN 5,716,889).
- 10. In reference to claims 1 and 16, Yoshida (JP 4-364063 A) discloses a structure which meets the claim. Figures 1 and 2 of Yoshida disclose an SiP (system in package) device comprising a chip on chip (COC) device having a logic chip (105) having a logic circuit and a memory chip (101) mounted on the logic chip (105). The memory chip (101) comprises basic chips (104) functioning as a chip independently from each other. A dicing line is interposed between the basic chips (104), connects the basic chips (104), and configures a part of the memory chip (101). A bump (106) connects the logic chip (105) and the memory chip (101). Although not shown, it is understood that a package covers the COC device. Yoshida does not disclose the use of an alignment

Application/Control Number: 10/787,413

Art Unit: 2826

mark in the dicing line. However the use of an alignment mark in the dicing line is well known in the art. Tsuji et al. (USPN 5,716,889, hereinafter referred to as the "Tsuji" reference) discloses that alignment marks in the dicing line provide alignment which is important for precise fine patterning (column 1, lines 15-39), and that precise alignment is a known goal in the art (column 1, lines 40-42). In view of Tsuji, it would therefore be obvious to provide an alignment mark in the dicing line.

- 11. With regard to claim 2, it is understood that the basic chips (104) have the same layout.
- 12. With regard to claim 5, Yoshida teaches all of the claimed invention except for the square shape and exact length of the basic chip. Although Yoshida does not teach the exact square shape and length as that claimed by Applicant:

Note that the specification contains no disclosure of either the critical nature of the claimed dimensions or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. <u>In re Woodruff</u>, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

The shape, size, dimension differences are considered obvious design choices and are not patentable unless unobvious or unexpected results are obtained from these changes. It appears that these changes produce no functional differences and therefore would have been obvious. Note *In re* Leshin, 125 USPQ 416.

Therefore claim 5 is not patentably distinguishable over the Yoshida reference.

13. With regard to claim 6, Yoshida teaches all of the claimed invention except for the exact width of the basic chip. Although Yoshida does not teach the exact width as that claimed by Applicant:

Note that the specification contains no disclosure of either the critical nature of the claimed dimensions or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. <u>In re Woodruff</u>, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

Application/Control Number: 10/787,413

Art Unit: 2826

The shape, size, dimension differences are considered obvious design choices and are not patentable unless unobvious or unexpected results are obtained from these changes. It appears that these changes produce no functional differences and therefore would have been obvious. Note *In re* Leshin, 125 USPQ 416.

Therefore claim 6 is not patentably distinguishable over the Yoshida reference.

Allowable Subject Matter

- 14. Claims 9-15 and 17-20 are allowed.
- 15. Claims 3, 7, and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 16. The following is a statement of reasons for the indication of allowable subject matter: the examiner is unaware of any prior art which suggests or renders obvious a chip on chip device formed of a memory chip mounted to a logic chip by a bump such that the memory chip contains basic chips which are connected by a dicing line where the logic chip outputs a control signal to the memory chip in order to change a specification in each basic chip.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Quinto whose telephone number is (571) 272-1920. The examiner can normally be reached on M-F 8AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sue Purvis can be reached on (571) 272-1236. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
